

Planning and Analysis of Public Policy

Qualified analysis and advice for the acceleration of the process of reforms

The duration of the entire course is 5 days

Course description

In the Soviet period the demand on the advisors for the development of strategic directions was not high, as the decisions and actions of the government were dictated by the ideology and were not subject to public control. In the new political and social situation, there is high demand on competent consultancy. The given training course is aimed at satisfying this demand. The training will assist public officials and scientific-educational staff in the field of governance, as well as NGO representatives interested in the development of State sector. The course will increase their awareness of the political processes.

Who might be interested in the course?

The training is aimed at public officials, scientific-educational personnel and NGO representatives who are involved in the development of State sector and deal with social sciences. The use of the intellectual potential of the above-mentioned persons would largely contribute to the solution of problems in various fields of policy-making. Despite the fact that the job opportunities for advisors or consultants are rather restricted, the majority of public officials act as consultants, as they assist high-rank officials in the decision-making process.

Benefits for you and your organization:

The participants of the training will get acquainted with the basics of policy analysis and the most useful tools, based on concrete case-studies.

The cooperation between public officials and scientific-educational staff will become more intense and efficient .

Research projects will become more practically-oriented.
